PROJECTS

MataPals

matapals-addingevent--bagdad6516.repl.co/

- Refined leadership and communication through biweekly Agile/Scrum meetings with 6 students.
- Improved time management efficiency with Jira by determining design requirements and tracking issues for senior capstone project.
- Drafted and designed 25+ responsive front-end components using Ajax, Bootstrap/CSS, and Figma.
- Implemented 5+ live counter and typing components for live chat functionality.
- Established database utilization through MongoDB and designed back-end with Express.
- Connected Google Maps and Geocode API to generate campus map for user meetups.

Movie Mania

github.com/leobabakhanian/movie-mania

- Launched 5+ account features, including user registration/login system with React, BCrypt, Material UI, and JSON Web Token.
- Developed headless content management system using CRUD and like/dislikes for user forum.
- Created functional Express/Node back-end and utilized middleware to connect to front-end.
- Formalized database integration to store user login and post data in MongoDB cluster.
- Utilized OMDb movie/show API with ability to search and display detailed media cards.

TransferMarket

github.com/leobabakhanian/TransferMarket

- Built full-stack web scraper accumulating data from HTML elements and XPath paths using Puppeteer.
- Integrated 5+ search components for users to scrape desired player URLs via transfermarkt.com.
- Stored scraped info in MySQL database and displayed player cards with HTML and JavaScript.
