EXPERIENCE

Wordpress Developer & E-commerce, Promed Onsite

Feb 2020 — Present

- Identified and implemented solutions including 30+ front-end features and 20+ pages for site in accordance with company standards
- Integrated eBay storefront with website, generating additional 200+% click-throughs and sales of surgical equipment
- Administered daily updates to Wordpress front-end using HTML, CSS, and Javascript
- Rebuilt back-end with PHP, which resulted in 50% higher load speed and 10% higher user retention
- Catalogued and listed 2000+ pieces of surgical equipment

Technologies: HTML, CSS, JavaScript, PHP, Wordpress

Front-End Developer, Johnny For Congress

Jan 2017 — Jan 2021

- Designed and deployed campaign site and donations page according to client's requirements
- Organized weekly meetings with campaign manager to regularly implement new features
- Dispatched 30+ monthly newsletter and marketing materials for supporter list, which increased donations by 100%

Technologies: HTML, CSS, JavaScript, PHP, Bootstrap, Wordpress

EDUCATION

California State University Northridge, Computer Science, Bachelor of Science

2022

- 3.5 GPA; *cum laude*

PROJECTS

MataPals

- Arranged biweekly Agile/Scrum team meetings and tracked tasks using Jira with 6 students to determine design requirements and test features for senior project
- Drafted and designed 25+ responsive front-end components using Ajax, Bootstrap/CSS, and Figma
- Implemented live counter and typing components for live chat functionality
- Established database utilization using MongoDB and designed back-end with Express
- Introduced 5+ new features such as likes for events and groups posts
- Added Google Maps and Geocode API to generate campus map for user meetups

Movie Mania

- Launched 5+ account features including user registration/login system with React, BCrypt, Material UI, and JSON Web Token
- Developed CRUD/headless content management system including like/dislikes, editing, and deletion in user forum
- Created functional Express/Node back-end and utilized middleware to connect to front-end
- Formalized database integration to store user/post data in MongoDB cluster
- Utilized OMDb movie/show API with ability to search and present detailed media cards

TransferMarket

- Built full-stack web scraper collecting HTML elements from XML Paths using Puppeteer
- Integrated 10+ search components for users to scrape player URLs via transfermarkt.com
- Stored scraped information in MySQL database and displayed player cards using custom HTML and JavaScript components

SKILLS

- Code: React + hooks, Javascript, NodeJS, CSS, HTML, Java, C++, PHP
- Tools: SQL, MongoDB, Puppeteer, Tailwind, Git, VS Code, Firebase, Heroku, React Router, React
- Redux, JWT, BCrypt
- Frameworks: ExpressJS, Bootstrap, Material UI
